Art Unit: 2697

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Mouse point device with integrated touch pad buttons.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 6 and 12 are rejected under 35 U.S.C. 102(b) as being unpatentable by US patent 5,805,144 to Scholder.

In reference to claim 6, Scholder shows in figure 2 a portable computer mouse system comprising at least one mouse button (223) and having at least one touch pad (220).

In reference to claim 12, as seen from figure 1, the external computer mouse comprises a housing that is separate from a central processing using housing and separate from a keyboard housing.

Art Unit: 2697

4. Claims 13, 18 and 19 are rejected under 35 U.S.C. 102(b) as being unpatentable by US patent 6,107,990 to Fleming.

In reference to claim 13, it can be seen from figure 2 of Fleming that it is apparent that the external computer keyboard mouse system comprises an external computer keyboard, at least one mouse button (210) and at least one touch pad (134).

In reference to claims 18 and 19, it is also apparent from figure 2 of Fleming that at least one touch pad and mouse button is integrated into an opening formed in a sidewall of the keyboard

Claim Rejections - 35 USC § 103

5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Scholder et al and US patent 5,741,217 to Gero.

In reference to claim 1, Scholder shows in figure 2 a portable computer mouse system comprising at least one mouse button (220) and having at least one touch pad (220), at least one touch pad having a periphery where at least one touch pad is integrated into an opening formed in at least one mouse button, such that the periphery of the touch pad is surrounded by walls of the opening. Scholder has combined the two entities, mouse button and touch pad together. On column 4, lines 62-64, Scholder explains that: "Those of ordinary skill in the art will see, however, that such mechanism surfaces may be placed on various other surfaces of the mouse body in an advantageous manner." Scholder's invention substitutes the prior art buttons, however if one would like to retain the mechanical touch of prior art buttons, one of ordinary skill in the art would have been motivated to place the touch pad on the mouse button, a fitting location as disclosed by Gero and shown in figure 3. It is true that Gero's invention is not

Art Unit: 2697

functionally the same as the applicant's claimed invention, however the motivation remains the same. It would have been obvious to one skilled in the art to place a sensor at the mouse button because of its large area and ideal location to receive commands from the user's fingers.

6. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Scholder and Gero as applied to claim 1 above, and further in view of US patent 5,268,674 to Howard et al.

In reference to claims 2-5 the different types of mouse buttons claimed are well known in the art. Howard discloses in his invention (quickly summarized in the abstract) mice with different button types such as: press button, press and lock button, sliding panel and one finger pressing button. It would have been obvious to one skilled in the art to select a particular button type from the numerous conventional mouse button types known in the art.

- 7. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Scholder and Howard. The reasoning of behind this rejection is the same as the rejection outlined for claims 2-5.
- 8. Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable in view of Scholder in view of Howard and further in view of Gero.

Claim 10 is rejected on the grounds outlined in the rejection of claim 1.

In reference to claim 11, Scholder shows in figure 2 a portable computer mouse system comprising at least one mouse button (220) and having at least one touch pad (220). On column

Application/Control Number: 09/888,819

Art Unit: 2697

4, lines 62-64, Scholder explains that: "Those of ordinary skill in the art will see, however, that

such mechanism surfaces may be placed on various other surfaces of the mouse body in an

advantageous manner." Scholder's invention does not account for positioning the touch pad in

an opening formed in a sidewall of the external computer mouse system. Gero, as seen in figure

3, does have a sensor on the sidewall of the mouse. One of ordinary skill in the art would have

been motivated to place the touch pad on the sidewall of the mouse, because it is a fitting

location as disclosed by Gero for a sensor. It is true that Gero's invention is not functionally the

same as the applicant's claimed invention, however the motivation remains the same. It would

have been obvious to one skilled in the art to place a sensor at sidewall of the mouse because of

its large area and ideal location to receive commands from the user's fingers.

9. Claims 14-16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over the

combination of Fleming and Howard. The reasoning of behind this rejection is the same as the

rejection outlined for claims 2-5.

10. Claim 17 are rejected under 35 U.S.C. 103(a) as being unpatentable in view of Fleming in

view Scholder and further in view of Gero.

Claim 17 is rejected on the grounds outlined in the rejection of claim 1.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.
